Payment of Fee

(Only complete if Applicant elects to pay the fee set forth in 37 CFR 1.17(p))

- ☐ A check in the amount of _____ is attached.
- ☒ The Director is hereby authorized to charge and credit Deposit Account **19-1853**
as described below.
- ☐ Charge the amount of _____
- ☒ Credit any overpayment.
- ☒ Charge any additional fee required.

Certificate of Transmission by Facsimile*

I certify that this document and authorization to charge deposit
account is being facsimile transmitted to the United States Patent
and Trademark Office (Fax. No. _____) on

(Date)

Signature

Typed or Printed Name of Person Signing Certificate

Certificate of Mailing by First Class Mail

I certify that this document and fee is being deposited on
_____ with the U.S. Postal Service as
first class mail under 37 C.F.R. 1.8 and is addressed to
the Commissioner for Patents, P.O. Box 1450,
Alexandria, VA 22313-1450.

INFORMATION DISCLOSURE STATEMENT

Commissioner for Patents
Mail Stop Reissue
Alexandria, Virginia 22313-1450

Sir:

Pursuant to 37 C.F.R. §§ 1.97-1.98, Applicant submits the patents identified on the accompanying form PTO-A820 for consideration by the Patent and Trademark Office during examination of the above-identified application for reissue of U.S. Patent No. 5,629,105 ("the '105 Patent"). The filing of this information disclosure statement should not be construed to be an admission that the cited references are, or are considered to be, material to patentability under 37 C.F.R. § 1.56(b).

U.S. Patent No. 3,111,277 to Grimsley was recently cited in a pending application owned by Applicant, serial No. 10/299,326. Grimsley discloses a portable electric flashlight having a light bulb 15 mounted within a socket 16, and a protective cartridge 17 enclosing the light bulb, its socket and a transparent bull's-eye lens 18.

Applicant does not believe that Grimsley or the aforementioned pending application are material to the present reissue application, and is disclosing them out of an abundance of caution. It is believed to have been well known prior to the earliest priority date of the application for the '105 Patent, November 24, 1992, to use a lens in front of an electric lamp, or to use electric lamps of various types having lensed enclosures in a variety of applications. This includes a light bulb or lamp 13 as shown in the '105 Patent, as well as encapsulated light emitting diode (LED) electric lamps in which the encapsulation serves a lens function.

U.S. Patent No. 4,783,725 to Schaller et al. discloses, in FIGS. 8 and 9, a flashlight having a housing 40 with a first portion 42 for holding batteries and a second portion 44 axially spaced with respect to portion 42 for holding a reflector 46. The second housing portion 44 has a first transparent wall 48, and the flashlight has a first light bulb 50 positioned to generate a collimated light beam through sidewall 46. A second light bulb 52 is placed adjacent to the reflector wall, and Schaller et al. states that "light from bulb 52 is reflected in a wide beam" through a second transparent wall 54 in second housing portion 44. Schaller et al. further states that "the light source for the flashlight is a bulb with an incandescent filament. However, other light sources may be used. For example the light source may compound a light emitted diode (LED)." (Col. 4, lines 9-13.) As shown in the drawing figures and described in Schaller et al., "[t]he beams generated by the two bulbs are oriented along two axes which are generally perpendicular to each other." (Col. 3, lines 31-33.) The flashlight may include switching means for activating the bulbs simultaneously or alternately.

U.S. Patent No. 1,423,911 to Cardwell discloses in Figure 1, a headlight having a cylindrical container 1 with an open end 2 to receive a bowl-shaped portion of a headlight 3 or reflector. The bowl-shaped portion of the headlight has a centrally disposed bulb 4 and a second electric bulb 5 positioned near the upper end of the reflector, wherein the second bulb 5 is of lower candle power than bulb 4. The headlight also has a switch 20 for independently activating lamps 4 and 5.

U.S. Patent No. 5,359,779 to Polk et al. discloses, in FIGS. 1 and 2, an illumination and laser sighting device having a housing 16 with a single compartment containing a power supply 20 and a receptacle 22 coupled to one end of the housing 16. At least one laser 30 is fixed to a support member 28 which is adjustably coupled to the receptacle 22, and an illumination lamp assembly 24 is coupled to the receptacle 22 in an offset position over the laser 30. The illumination lamp assembly 24 includes a lamp bulb 44, a reflector housing 38, a lens 46 adapted for being coupled over one end of the reflector housing 38, and a reflector 42 secured between the lens 46 and reflector housing 38. The reflector 42 has an aperture 54 through a side wall, and is aligned over laser 30 to allow passage of emitted wavelengths of light from the laser 30 through reflector 42 and lens 46. The illumination and laser sighting device also has a switch 56 for selectively activating lamp bulb 44 and laser 30.

Applicant respectfully requests that the identified documents be considered in the examination of this reissue application, and that their consideration be made of written record in the reissue application file.
